## Start Your Career in the Environmental Technology Industry

The environmental technology industry is vast and growing. It spans air quality, water and wastewater, emergency response, energy conservation, safety and health, natural resources and waste management, including hazardous materials. It embraces hundreds of job titles, including dozens of technical jobs that require specific certifications but not a college degree. With the long-term decline of manufacturing and construction employment, living-wage occupations for non-college-degreed workers are hard to find. Environmental Technology is one industry that offers many such occupations. Because it is driven by law and regulation, it is highly resistant to the fluctuations of the business cycle. And because it deals with domestic issues of air, water, land and energy, the jobs cannot be outsourced to other countries.

The **JFYNetWorks** Environmental Technology Training is a gateway into this industry. The program is funded by the United States Environmental Protection Agency. It is one of the original EPA job training programs initiated under the Brownfields program in 1997.

**JFYNetWorks'** ET program runs for 14 weeks. Students learn transferable skills that open the door to many other industries such as Biotechnology, Waste Management and Emergency Preparedness & Response. The **JFYNetWorks** Environmental Technology Training is the longest-running industry-recognized and EPA endorsed environmental job training program in Massachusetts.

## Endorsed by Industry, Government, Academia

- Curriculum is developed with **Suffolk University, UMASS Lowell and industry partners** and approved by the U.S. Environmental Protection Agency.
- Training program is licensed by the **MA Department of Elementary & Secondary Education**.
- **Featured in the Boston Globe**, Boston Herald, National Public Radio's *Living on Earth* and WCVB's *Chronicle*.
